

TAKA

Decentralized Exchange &
Asset Management Protocol
for discovering liquidity and
trade automation.

Problem

Here are few problems faced by DEXes and Asset Management Protocols.

Interoperability

The inability to perform cross chain transfers and trade on multichain.

Low Liquidity

Trading on DEXes can be quite challenging when trading with a large capital because of liquidity limitations.

Automation Tools

Lack of smart trading tools to enable traders automate their trade activities.

The Solution

Here are ways Taka is solving this problems.

Multichain

Taka features a multichain Dex and bridge protocol to enable cross chain transfers and swap.

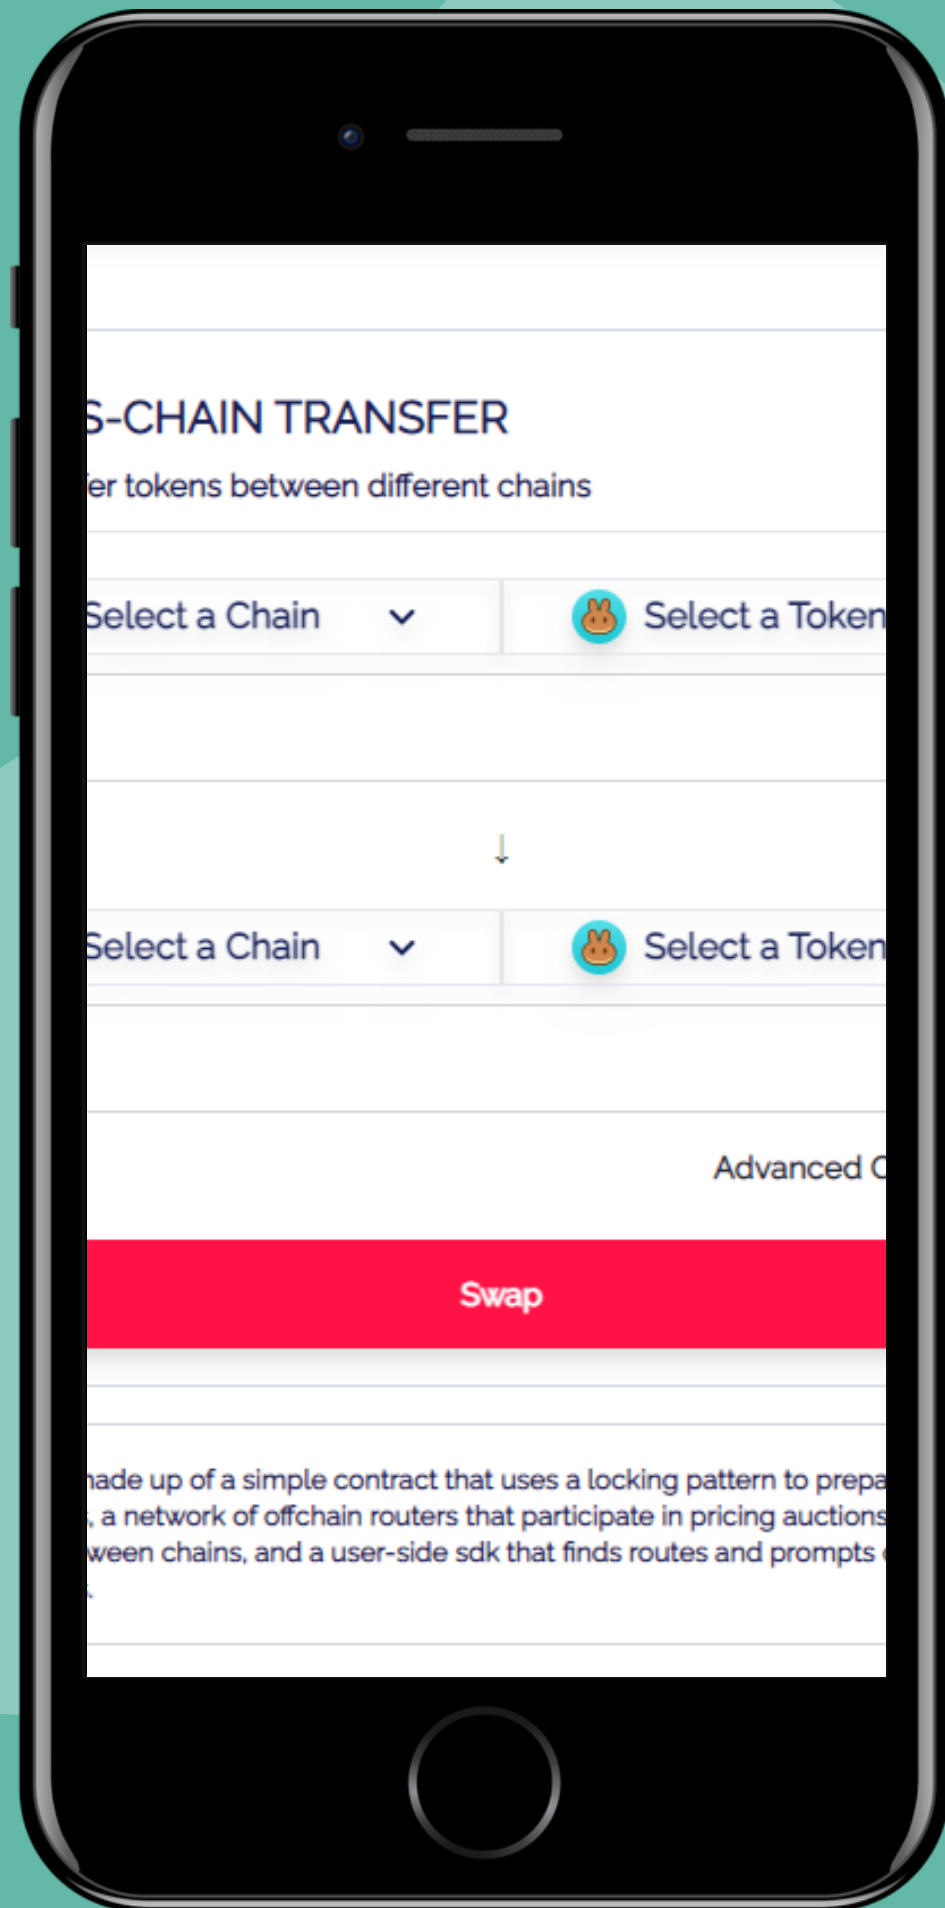

Deep Liquidity

The aggregation protocol offers deep liquidity by sourcing liquidity from several DEXes and protocols.

Trade Automation

Taka smart trade protocol allow traders to automate their trade activities with features like limit order, RFQ, trailing buy etc.

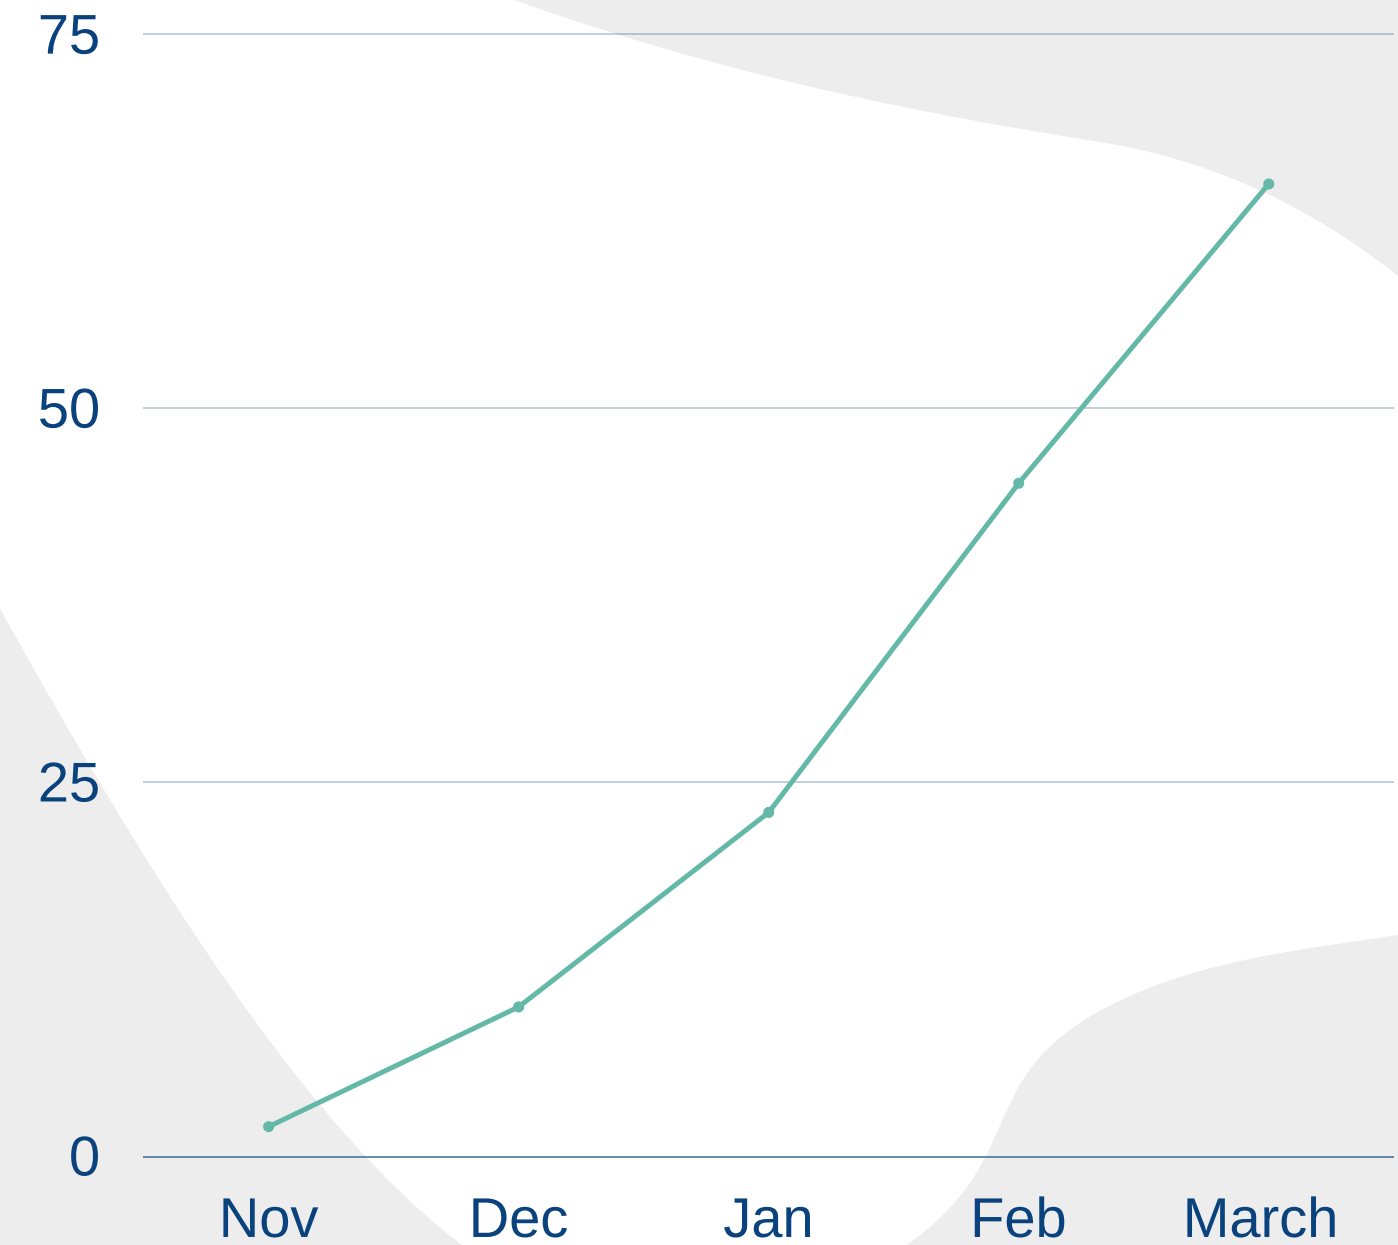

Taka Products

The Taka product are made up of 6 core protocols.

- Bridge protocol
- Liquidity protocol
- Aggregation protocol
- Smart trade protocol
- Derivatives protocol
- Asset management protocol
